

Instructions for authors

General considerations

Studies that range within the scope of Vascular Specialist International (VSI) can be considered for publication. All manuscripts that are being considered for publication at VSI should follow the specified instructions of the journal, and any details that are not specified should follow the Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals from the International Committee of Medical Journal Editors (<http://www.icmje.org>). The journal reserves the right to reject any manuscript that does not meet the standards for publication.

Originality of manuscript

All manuscripts should be original in nature and must not have been published previously or be under consideration for publication in other scientific journals at the time of submission. The corresponding author is responsible for obtaining the approval for publication of the manuscript from all the other coauthors.

Peer review policy

All submitted manuscripts are subject to peer review. The journal adheres to a single-blind review policy, where the authors' names and affiliations are opened to the reviewers, but the reviewers' identities are kept confidential. All manuscripts are reviewed by at least two reviewers appointed by the editor-in-chief and shall be informed of one of the following decisions in the short-term: Accept, Major revisions, Minor revisions, Reject. Any revisions (if applicable) should be resubmitted within 4 weeks for reconsideration of publication at VSI.

Disclosure of conflict of interests

Conflict of interest has become a prominent issue in medical journal publications. All authors are required to report potential conflicts of interest that could inappropriately influence the author's work. This includes any financial (employment, consultancies, stock ownership, honoraria, paid expert testimony, patent applications, travel grants) or other relationships (academic or even personal) with commercial entities whose products or services are related to the subject matter in the manuscript, or sociopolitical issues that can cause conflict. Such conflicts should be disclosed at the end of the manuscript, and the editor may use such information as a reference for editorial decisions.

Research and Publication ethics

All research submitted to the journal must be conducted with high ethical norms. These include protection of human and animal rights, confidentiality and written informed consent.

For human investigations, the principles outlined in the Declaration of Helsinki (<http://www.wma.net/en/30publications/10policies/b3/index.html>) should be followed and approval from the Institutional Review Board (with approval number) should be obtained. A written informed consent must be obtained from all subjects involved and should be indicated in the submitted article. Patient anonymity must be preserved and confidential information should not be published. If identifying information is essential for scientific purposes, authors must provide a signed statement from the patient granting approval for the publication of identifying materials, including photographs. For studies involving clinical trials, the trial should be registered in a public database prior to enrollment of the first patient, such as the registration sites of the National Library of Medicine (<http://www.clinicaltrials.com>) or the Korean National Institute of Health (<http://cris.nih.go.kr/cris/index.jsp>).

For experiments on animal subjects, the author should state that the use of animals was approved by the Institutional Animal Ethical Committee or equivalent, and that the animal care complied with the Guide for the Care and Use of Laboratory Animals (Institute of Laboratory Animal Resources, Commission on Life Sciences, National Research Council, <http://www.nap.edu/readingroom/books/labrats/index.html>).

All manuscripts should follow the publication ethics at all times. These include plagiarism, data fabrication or falsification, citation manipulation, improper authorship contribution, duplicate submissions and redundant submissions. All manuscripts undergo a check for plagiarism at the time of submission, and any infringement of publication ethics are subject to immediate rejection (at the time of submission) or withdrawal (for already published articles). Improper authorship may apply if any of the authors have not made a substantial contribution to (1) the conception and design, (2) acquisition, analysis and interpretation of data, (3) drafting or revising the article or (4) final approval of the manuscript.

For other policies of research and publication ethics not stated above, the journal follows the policies established by the Good Publication Practice Guidelines for Medical Journals from the Korean Association of Medical Journal Editors (<http://www.kamje.or.kr>) or the guidelines regarding research and publication ethics from either the International Committee of Medical Journal Editors (<http://www.icmje.org>) or the Committee on Publication Ethics (<http://publicationethics.org>). Any manuscripts that do not follow the guidelines for research and

publication ethics are subject to sanctions, which are to be decided by the editorial board, and may include restriction from future submissions to the journal.

Copyright and Creative Commons License

All authors are required to download and sign the Author Submission Requirement Form, which includes a statement for full transfer of copyright to the Korean Society for Vascular Surgery, and must be submitted at the time of submission. For further information, please refer to our [Open Access](#) policies.
